

TABLE OF CONTENTS

FIRST PART: DYNAMIC MODELS OF THE TRACK AND TRAIN

Introduction - Linear systems	25
Chapter 1 - The simplest dynamic model. One degree of freedom	33
1.1.- Closed form solution. Free vibrations, no damping. System frequency	36
1.2.- Closed form solution. Free vibration with damping	37
1.3.- Closed form solution. Forced vibrations	40
1.4.- Closed form solution by power series	42
1.5.- Impulse response. Solution by convolution or Duhamel Integral	43
1.6.- Mass-spring system. Numerical solutions	48
1.6.1.- <i>Finite differences, free vibrations</i>	49
1.6.1.1.- <i>Integration with Excel, free vibrations</i>	50
1.6.2.- <i>Finite differences, forced vibrations</i>	51
1.6.3.- <i>Finite differences, Runge-Kutta algorithms</i>	54
1.6.4.- <i>Numerical solution with Matlab's ode45</i>	55
1.6.5.- <i>Numerical solution with Matlab's Simulink</i>	59
1.6.6.- <i>Numerical and closed form solution with Laplace Transform</i>	61
1.6.7.- <i>Numerical solution by Laplace Transform with Matlab commands "tf" and "lsim"</i>	65
1.6.8.- <i>Numerical solution by the State Space equation</i>	67
1.6.8.1.- <i>Matrix expression</i>	68
1.6.8.2.- <i>Integration of the matrix differential equation</i>	69
1.6.8.3.- <i>Iterative solution</i>	70
1.6.8.4.- <i>State Transition matrix and Partial Response matrix</i>	72
1.6.8.5.- <i>Direct integration of the State Space equation with Matlab</i>	72
1.6.8.6.- <i>Integration of the State Space equation with "lsim" command in Matlab</i>	74
1.6.9.- <i>Solution by the Z Transform</i>	77
1.6.10.- <i>Solution by the Fourier transform</i>	78
1.6.11.- <i>Dynamic forces on the track. One mass- spring system</i>	79
<i>Diferentiation and integration with Matlab of a longitudinal profile</i>	80
1.7.- Mass-spring-damping system. Numerical solutions	83
1.7.1.- <i>Finite differences, free vibrations</i>	83
1.7.1.1.- <i>Damping. Integration with Excel, free vibrations</i>	83
1.7.2.- <i>Finite differences, forced vibrations</i>	84
1.7.3.- <i>Numerical solution with Matlab ode45</i>	85
1.7.4.- <i>Numerical solution with Matlab Simulink</i>	87
1.7.5.- <i>Numerical and closed form solution with Laplace Transform</i>	88
1.7.6.- <i>Numerical solution by Laplace Transform with Matlab commands</i> <i>"tf" and "lsim".</i>	89

1.7.7.-	Numerical solution by Laplace Transform with Simulink.	90
1.7.8.-	Numerical solution by the State Space equation with Visual C++.	92
1.7.9.-	Numerical solution by the State Space equation with Matlab	97
1.7.10.-	Numerical solution with Excel	98
1.7.11.-	Numerical solution by convolution or Duhamel Integral	99
1.7.12.-	Dynamic forces on the track. One mass- spring-damper system	99
1.8.-	Frequency of the system and the oscillations of the mass	100
Chapter 2 -	Quarter-truck model. Dynamical system with two degrees of freedom	107
2.1.-	Differential equations of the movement of the masses	109
2.2.-	Finite differences solution	111
2.3.-	Finite differences integration	112
2.4.-	Finite differences integration. Visual C++ routine	114
2.5.-	Finite differences integration with Excel	117
2.6.-	Finite differences direct integration with Matlab	118
2.7.-	Integration by the State Space equation with Visual C++	119
2.8.-	Integration by the State Space equation with Matlab	125
2.9.-	Transfer function from the system state space equation	127
2.10.-	Numerical solution. Movement of two masses, Matlab ode45 routines	129
2.11.-	Numerical solution. Movement of two masses, Simulink	132
2.12.-	Numerical solution. Movement of two masses, Matlab state space equation. Command "lsim"	134
2.13.-	Numerical solution. Movement of two masses, Matlab Laplace transfer function. Command "lsim"	137
2.14.-	Series of two linear systems. Transfer function of two vibrating masses	140
2.15.-	Two masses system. Frecuencies of the system	143
2.16.-	Two masses model. Dynamic forces on the track	144
Chapter 3 -	Three and four-masses systems	147
3.1.-	Three masses-spring-damper system. Numerical solution, ode 45, Matlab	149
3.2.-	Integration by the State Space equation with Matlab	153
3.3.-	Numerical solution. Movement of three masses, Simulink	155
3.4.-	Numerical solution. Movement of three masses, Matlab state space equation. Command "lsim"	159
3.5.-	Three linear systems in series. Transfer function of three vibrating masses	160
3.6.-	Three masses model. Dynamic forces on the track	164
3.7.-	Applications of the three masses model. Vibration of the masses	165
3.8.-	Four masses-spring-damper system. Numerical solution, Matlab	166
3.8.1.-	Four masses-spring-damper system. Numerical solution, ode 45 Matlab	166
3.8.2.-	Four masses-spring-damper system. Numerical solution, Simulink	169
3.8.3.-	Series of four linear systems. Transfer function of four vibrating masses	169
3.9.-	Three and four masses system. Frecuencies of the system	171
3.10.-	Four masses model. Dynamic forces on the track	173

Chapter 4 -	Half-truck model. Four degrees of freedom. Rolling	175
4.1.-	Half-truck model. Differential equations of the movement	177
4.2.-	Half-truck model. Finite differences solution	180
4.2.1.-	Half-truck model. Matrix finite differences solution, Visual C++.	183
4.2.2.-	Half-truck model. Matrix finite differences solution, Matlab	188
4.3.-	State space solution	190
4.4.-	State space solution, Matlab, commands "lsim" and "ss"	193
4.5.-	Half-truck model with rigid axle	199
4.5.1.-	Finite differences solution	202
4.5.2.-	Finite differences matrix solution	204
4.5.3.-	Routine listing, Visual C++	205
4.5.4.-	Finite differences matrix solution in Matlab	209
4.5.5.-	State space solution	209
Chapter 5 -	Simplified full-truck model with independent wheels. Seven degrees of freedom. Rolling and rocking	213
5.1.-	Full-truck model. Differential equations of the movement	215
5.2.-	Finite differences solution	220
5.2.1.-	Iterative solution	223
5.2.1.1.-	Matrix solution with Matlab	226
5.3.-	State space solution	229
5.3.1.-	State space direct solution, Matlab	233
5.4.-	State space solution, commands lsim and ss, Matlab	235
Chapter 6 -	Simplified full-truck model with rigid axle	239
6.1.-	Simplified full-truck model with rigid axle	241
6.2.-	State space solution	246
Chapter 7 -	Vertical mechanics of the track	257
7.1.-	Continuous beam on elastic foundation. Zimmermann-Timoshenko method	259
7.1.1.-	Static loads. Zimmermann-Timoshenko equations	261
7.1.2.-	Static loads. Track on sleepers. Adaptation of the Zimmermann-Timoshenko equations	269
7.1.3.-	Example. Zimmermann-Timoshenko equations, single axle	271
7.1.4.-	Example. Zimmermann-Timoshenko equations, two axles	273
7.2.-	Quasi-static loads on the track	279
7.3.-	Dynamic loads on the track	282
7.3.1.-	Empirical expressions of the dynamic amplification factor	282
7.3.2.-	Empirical expressions, DB, Germany	283
7.3.3.-	Empirical expressions, SNCF, France	284
7.3.4.-	Other empirical expressions of the dynamic factor ϕ	286
7.3.5.-	Estimation of the dynamic factor ϕ with the dynamic models	286

Chapter 8 -	The Unold-Lorente de Nó Method. Track as a continuous beam on discrete elastic supports. Rail bending between sleepers	287
8.1.-	The Unold-Dischinger-Lorente de Nó method	289
8.2.-	Single load between sleepers	293
8.3.-	Single load on an sleeper	294
	Example. High Speed Line Madrid-Barcelona, 1st part	294
8.4.-	Single load between sleepers	296
	Example. HSL Madrid-Barcelona, 2nd part	296
8.5.-	Forces and moment on the adjacent stretches	297
	Example. HSL Madrid-Barcelona, 3rd part	298
8.6.-	Iterative solution for the adjacent stretches	297
8.7.-	Wheel on a sleeper. Loads and settlements of the next sleepers	300
Chapter 9 -	Dynamic forces of the unsprung mass on the track	307
9.1.-	Rail deformation due to the wheel between sleepers. Dynamic forces	309
9.2.-	Track settlement with different vertical stiffnesses	317
9.3.-	Examples. Dynamic forces on track for different vertical track stiffnesses	319
9.4.-	Transition from embankments to structures. Low to high vertical stiffness of the track	323
9.5.-	Three masses model. Influence of the sprung masses, truck and passenger box	329
9.6.-	Loss of energy in the track due to vertical stiffness	335
9.7.-	Wheel flats	338
Chapter 10 -	Some values of the vertical track stiffness	345
10.1.-	The outstanding work of France and ORE in the 70's	347
10.2.-	Values in 2008	352
	Wheel-rail contact stiffness	352
	Pad stiffness	355
	Ballast, subballast and platform	356
	Global vertical stiffness	357
	Values measured in Sweden (Dahlberg, 2006)	358
	Values suggested by Prof. Lopez Pita	359
	Values of ballasted tracks in Germany	362
	Other values given in the literature	365
	Values in ballasted track in Japan, small gauge track	366
10.3.-	Vertical stiffness on high speed lines in Spain. Sevilla and Barcelona lines	367
	Some explanation of the high lateral movements in Barcelona high-speed line	370
10.4.-	Slab track in Spain in the 70's. Trial slab track in Ricla-Calatorao	373
10.5.-	Shinkansen slab track	375
10.6.-	Rheda 2000 slab track	378
10.7.-	Trial slab track zones in Benicassim	380
10.8.-	Transition blocks from embankments to structures	383
10.9.-	Difference on the vertical dynamics of the automobiles and the trains	392
10.10.-	Some solutions for the transitions on high speed lines	394

Capítulo 11 - Some values of the parameters of the rolling stock	397
11.1.- Siemens ICE3, AVE series 103	399
11.1.1.- <i>Unsprung masses</i>	400
11.1.2.- <i>Sprung masses, primary suspension</i>	400
11.1.3.- <i>Sprung masses, secondary suspension</i>	401
11.2.- Talgo 250 and Talgo high speed 350	402
11.3.- Alstom AVE S-100 train	404
11.4.- CAF-Siemens-Bombardier trains, Metro de Madrid	405
11.5.- Trains series 2000, 5000, 6000, 7000 and 9000, Metro de Madrid	407
11.6.- Shinkansen trains	415
Chapter 12 - Multibody system analysis. SIMPACK and ADAMS	419
12.1.- Actual systems with hundreds of degrees of freedom	421
12.2.- Multibody system software, MBS	423
Chapter 13 - A quality indicator of the track based on the dynamic models	431
13.1.- The IRI indicator of the roughness of a road pavement	433
13.2.- Indicator of the quality of the track	441
Quality of the two rails. Rolling indicator	449
Chapter 14 - Reasons of the changes in vertical rigidity of the track. Examples in some high speed lines	451
14.1.- Example 1. Sevilla AVE embankments. Crossing of Sierra Morena with 15 short tunnels	459
14.2.- Example 2. AVE Madrid-Barcelona	473
14.3.- Example 3. AVE Córdoba-Málaga, 117 km/h	489
14.4.- Example 4. AVE Madrid-Valencia	499
14.5.- Example 5. AVE Madrid-Valladolid. Guadarrama tunnel.	507
14.6.- Example 6. AVE Madrid-Galicia. Lubián-Orense	512
14.7.- Example 7. AVE Madrid-Galicia. Orense-Lalín-Santiago	518
14.8.- Example 8. Shinkansen of Japan	522
14.9.- Conclusions for the student	531

SECOND PART: **INTRODUCCIÓN TO DIGITAL SIGNAL PROCESSING IN RAILWAY ENGINEERING**

Chapter 1 -	Digital signals in railways and roads	543
1.1.-	Introduction.	545
1.2.-	Digital signals and track maintenance	547
1.3.-	Digital signals and road pavements	551
Chapter 2 -	The Discrete Fourier Transform, DTF	553
2.1.-	Fourier series	555
2.2.-	Discrete Fourier Transform, DTF.	560
2.3.-	DTF routine in Visual C++	565
2.4.-	DTF routine in Matlab	567
2.5.-	DTF routine in Visual Basic in Excel	570
2.6.-	The variance of the series or longitudinal track profile. Parseval theorem in discrete functions	572
2.7.-	Properties of the DTF. Nyquist frequencies, Aliasing and Leakage	573
	Nyquist wavelengths or frequencies	573
	Sampling theorem	574
	Leakage	575
	Aliasing	576
	Length of the sample	577
2.8.-	DTF and the slope of the track	579
Chapter 3 -	The Fast Fourier Transform, FFT	581
3.1.-	The Fast Fourier Transform, FFT	583
3.2.-	FFT routine of Prof. José Puy	584
3.3.-	FFT in Matlab	594
3.4.-	Reconstruction of the of the original track longitudinal profile	596
3.5.-	Advantages and disadvantages of FFT over DTF	596
Chapter 4 -	The so-called “Spectral density of energy of the longitudinal defects of the track”	597
4.1.-	The “Spectral density of energy”	599
4.2.-	Slope of amplitude spectra of railway tracks and road pavements	604
4.3.-	Wave energy spectra and tidal spectra	605
4.4.-	Track defects and the longitudinal slope	606
4.5.-	Longitudinal profile and periodogram of a railway track. Line 9, Metro de Madrid	608
	Horizontal part of the track	611
	Horizontal bridge	614
	First differences of the longitudinal profile	615
	Second differences of the longitudinal profile	617
4.6.-	Example. Spectral analysis of some highway pavements in Spain	618

4.7.-	Example. Defects in Line 8 track in Metro de Madrid	621
4.8.-	Example. Pavement slab in southner bypass tunnel in M-30 highway in Madrid	623
4.9.-	Interpretation of the periodogram of the longitudinal profile of a railway track or a highway pavement	625
	A.- Decimation. Halving the number of points	626
	B.- Eliminating the slope of the track (series detrending)	626
	C.- Changing the sampling interval	627
Chapter 5 -	Digital filters	629
5.1.-	Introduction	631
5.2.-	The simplest analog filters	631
	Moving averages	631
	3 points moving average	631
	2 points moving average	633
	The 3 meters Sliding Rule for road pavements	634
	The Profilograph or Viagraph	638
	The Mauzin vehicles, track monitoring	641
	The modern tamping machines	641
	5.2.1.- <i>First differences of the data of the longitudinal profile</i>	644
	5.2.2.- <i>Second differences of the data of the longitudinal profile</i>	645
5.3.-	Butterworth autorregresive filter	647
	5.3.1.- <i>Data series</i>	647
	5.3.2.- <i>Longitudinal profile of the track as difference equations</i>	648
	5.3.3.- <i>Z transforms of the longitudinal profile. B, the backwards or delay operator</i>	649
	5.3.4.- <i>Digital filters. High pass, low pass, reject band, pass band</i>	652
	MA filters, Moving Average	655
	AR filters, Autorregresive	655
	ARMA filters, AR and MA	655
5.4.-	Design of a simple digital filter. Butterworth AR sine, low pass order 2	656
5.5.-	Butterworth general sine filter, low pass. Otnes-Enochson method	661
Chapter 6 -	Parametric estimation methods	665
6.1.-	Introduction. Butterworth autoregresive AR sine filter routines	667
6.2.-	Spectral density by parametric methods	668
6.3.-	Spectral density of the AR series	668
6.4.-	Coefficients a_i . Autocorrelation of the series. Yule-Walker equations	669
6.5.-	Alternative methods of parameter estimation	670
6.6.-	The $X'X$ matrix	672
6.7.-	Solution of the Yule-Walker system. Levinson-Durbin algorithm	673
6.8.-	Modulus of the denominator	674
6.9.-	Spectral density function modulus	676
6.10.-	Practical applications	676
6.11.-	Conclusions	678

Chapter 7 -	Filtering programs in Matlab	681
7.1.-	Introduction	683
7.2.-	Filtering in wave lengths	684
7.2.1.-	Low pass filters (pass long wave lengths or low frequencies)	684
	Butterworth filters	684
	1 st part: filter creation and filtering of the longitudinal profile	684
	2 nd part: periodograms of the original and filtered longitudinal profiles	685
	Chebyshev filters	686
	Elliptic filters	687
7.2.2.-	High pass filters (pass short wave lengths or high frequencies)	688
7.2.3.-	Band-pass filters (pass wavelengths between cut-offs)	688
7.3.-	Filtering in frequencies	690
7.3.1.-	High pass filters (pass high frequencies)	690
	Butterworth filters	690
	Chebyshev and Elliptic filters	692
7.3.2.-	Low-pass and band-pass filters	692
7.4.-	Filtering by convolution. G. Banzo routines	693
7.5.-	The perfect filter: filtering by erasing in periodogram. C. Rodriguez and J. Blanquer routines	698
7.6.-	Example. High Speed line Madrid-Barcelona. Lateral accelerations	701
Chapter 8 -	Example. Accelerations and frequencies of axle, truck and passenger box	707
8.1.-	One mass model. Unsprung mass (axle) and track	709
8.2.-	Two mass model. Unsprung mass, sprung mass (truck) and track	712
8.3.-	Three mass model. Unsprung mass, sprung masses (truck and box) and track	715
Chapter 9 -	Example. Waterfall graphs. Periodogram of lateral accelerations, Zaragoza AVE	719
9.1.-	Waterfall graph of 500 km of track	721
9.2.-	Waterfall graph. High embankments zone Guadalajara-Calatayud	725
Chapter 10 -	Measurement of the longitudinal rail profile	729
10.1.-	IRI measurement in highways	721
10.2.-	Measurement of longitudinal profile of rails. Inertial plane	725
Chapter 11 -	Railway comfort. The Standard UNE-ENV 12299	745
11.1.-	Measurement of data for calculation of comfort	747
	Matlab program. Frequency domain	751
	Matlab program. Time domain	755

Chapter 12 - Reduction of railway vibrations	759
Preliminary análisis	761
Example, building in Madrid	763
12.1.- Elastic layer below the track	765
12.1.1.- <i>Finite difference solution</i>	767
Vibrations reduction in the new Metrosur track in Madrid	771
- Twin block system, corkelast and Vossloh fittings	772
- Twin block system, Pandrol Vanguard fittings	772
- Twin block Edilon superelastic blocks	773
- Sylomer elastic layer below track slab	774
- Tiflex elastic layer below track slab	774
Accelerations measured in tunnel walls	776
Accelerations measured in surface, street level	777
Track settlement	778
Horizontal deformation. Track width variation	779
12.1.2.- <i>Vibrations reduction in Teatro Real, Madrid</i>	779
 Listing of Computer programs	 783
 Bibliography	 789
